

## Ductless Specialist

Ductless systems are not one-size-fits-all. It's important to choose a heating and air conditioning contractor who knows ductless.

### Team of Professionals

When you choose **Alpine Ductless Heating and Air Conditioning**, you are choosing a team of professionals whose expertise is ductless technology. We specialize in designing the right ductless system for each home or business.

We're **Certified Master Installers** of Ductless Heat Pumps by the Northwest Ductless Project with over 1,500 systems installed in the Puget Sound area in less than five years. All of our team members receive updated training regularly. *We are the Ductless Specialists.*

### Resources, Knowledge, Access

We find the right product and configuration for each unique installation, with our resources, knowledge and access to the world's leading ductless manufacturers.

Visit us online to learn more.

Air Conditioning**

Specialists

IN DUCTLESS TECHNOLOGY

Enjoy Warm Winters and Cool Summers  
with a Highly-Efficient Ductless Heat Pump

Get Comfortable, Save Money, Breathe Easier

# 1

## What is a ductless heat pump?

A ductless heat pump is a highly-efficient heating and air conditioning system in one.

Ductless technology has been used in Europe and Asia for 30+ years and is now gaining momentum in the United States.

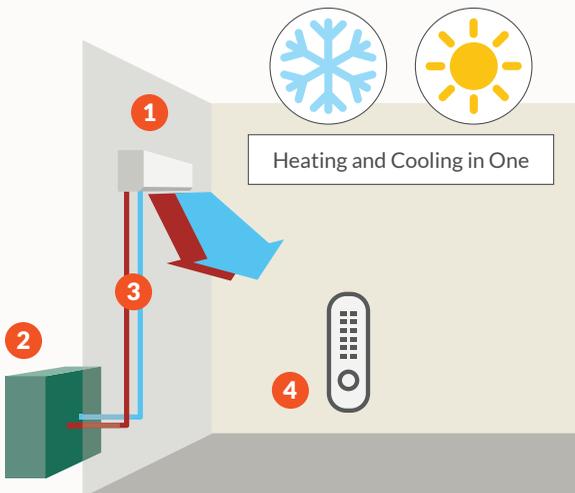

### Save Up to 50% on Energy Bills

In a properly insulated home or business, a ductless heat pump can help save up to 50% on monthly energy bills.

### 4 Simple Components

There are four components of a ductless heat pump:

1. An **indoor unit**
2. An **outdoor unit**
3. **Line set**—a communication cable and refrigerant line
4. A **hand-held remote**, or a thermostat, for easy control

# 2

## How does it work?

Standard heat pumps use the same technology that your refrigerator uses. They transfer heat from one place to another.

### Optimized Energy Efficiency

Unlike standard heat pumps that run at 100% capacity all of the time, the 'ductless inverter technology' in a ductless heat pump continuously adjusts to match the heating and cooling load required, optimizing energy efficiency. They typically operate at 20–50% capacity.

Think of the energy savings like driving a car.

A **ductless system** is like driving a car on cruise control.

A **traditional system** is like starting and stopping at every stop light in a gas guzzler.

# 3

## Is a ductless heat pump right for me?

If your heating and air conditioning system provides uneven temperatures, is outdated and noisy, or is very expensive to operate—now is a good time to consider upgrading to a ductless system. Ductless technology just makes good sense.

### Ductless Technology

- Provides even, quiet, comfortable indoor temperatures, all year long
- Saves money and energy
- Helps to clean the air

### Homes and Businesses

Ductless technology is a perfect solution for well-insulated homes and businesses in the Pacific Northwest.

# 4

## Can I afford a ductless system?

Alpine Ductless professionals provide assistance to create the best possible system while saving you money.

### Rebates, Grants, Tax Credits

We are experts in manufacturer and local utility rebates, grant program eligibility and federal tax credits.

### Low-Interest Financing

We offer 0–3.9% financing, depending on your approved credit (OAC), and your utility company.

My power bill has been cut in half and my whole house is comfortable.
